10.1 Layout 注意事项/ Layout Notes

1) 元件布局/Component layout

GNSS 模块在 PCB 上的布局对于获得最佳的 GNSS 性能来说是至关重要的。与天线的连接应越短越好，避免对信号造成过大的衰减。在系统板设计上，要确保射频电路跟其他数字电路严格分开，将模块远离 PCB 上的数字区域。同时还必须将 GNSS 模块远离发热量较大的区域。

The layout of the GNSS module on the PCB is critical for obtaining the optimal GNSS performance. The connection to the antenna should be as short as possible to avoid excessive attenuation of the signal. In the system board design, ensure that the RF circuit is strictly separated from other digital circuits, and keep the module away from the digital area on the PCB. The GNSS module must also be moved away from the heat.

2) 无源天线设计/Passive antenna design

天线馈线的长度应尽可能短，且无源天线的下方要有一块完整的地。建议无源天线与 GNSS 模块放在 PCB 板相对的另一面。

The antenna feeder shall be as short as possible and have a complete plot beneath the passive antenna. It is recommended that the passive antenna and the GNSS module are placed on the other side of the PCB board.

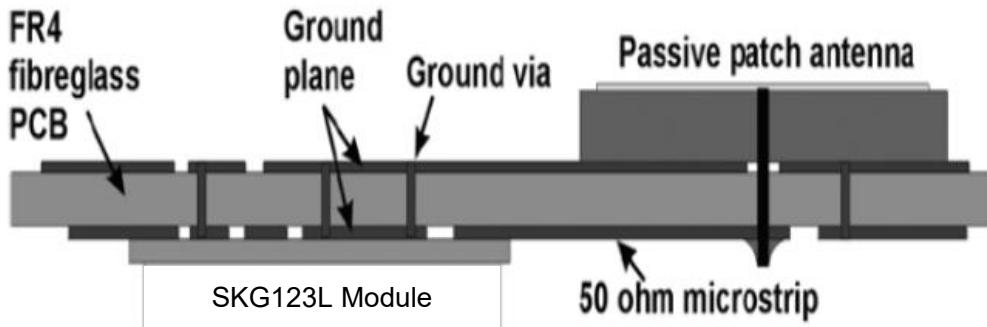

图 10.1-1 SKG123L 参考设计/Figure 11.1-1 SKG123L Reference Design

3) 阻抗匹配/ Impedance matching

天线馈线的阻抗需为 50 Ohm，为了达到 50 Ohm 的阻抗，微带线的宽度 W 要根据导线和参考面的距离 H, PCB 介质板的介电常数 ϵ_r , 以及 PCB 的结构来选择。

The impedance of the antenna feeder should be 50 Ohm. In order to reach the impedance of 50 Ohm, the width W of the microband line should be selected based on the distance between the wire and the reference surface H, the dielectric constant of the PCB medium plate ϵ_r , and the structure of the PCB.

4) 微带线设计/ Microband line design

- 微带线的长度应该尽可能的短，标准 PCB 上应该尽量不选用超过 2.5 cm (1 inch) 而又没有屏蔽层的微带线； /The length of the microstrip line should be as short as possible, and the standard PCB should try not to choose more than 2.5 cm (1 inch) and no shielding layer of the microstrip line;

- 射频连接线的走线应避免靠近数字信号线; /The wiring of the RF connection line should be avoided close to the digital signal line;
 - 在连接地平面时要采用尽可能多的过孔; /In the ground plane to use as many holes as possible;
 - 布线应远离噪声源, 如:开关电源, 数字信号, 晶振, 处理器等; /Wiring should be far away from the noise sources, such as: switching power supply, digital signal, crystal vibration, processor, etc.;
 - 微带线相对应的参考地层应保持完整; /The reference strata corresponding to the microstrip line shall remain intact;
 - 微带线特性阻抗必须为 50 ohm; /The microstrip line characteristic impedance must be 50 ohm;
- 为了减小信号衰减, 微带线走线时要避免锐角。

In order to reduce signal attenuation, microstrip lines should avoid sharp angles.
